* The electric maximum response frequency is specified by resolution (pulse number) and the maximum number of revolutions.
 Electrical maximum number of revolutions = ((Maximum response frequency/Resolution) x 60)
 Therefore, if the encoder rotates at a speed greater than the electrical maximum number of revolutions, the signals do not electrically follow.

Output Waveform

Totem-pole

《2-phase output type》

a, b, c, d = $(1/4 \pm 1/8) P$
 e: 400 pulses or less 25 to 150%
 500 pulses or more $1^\circ \pm 30'$
 (At 1,800, 3,600, 5000 pulses only: 50 to 150%)

* OUT Z (origin output) is generated when passing the origin position regardless of rotational direction.
 * There is no OUT Z for the R type.

Note: Clockwise rotation when the main body is seen from the axle side is the normal rotation.
 Phase advancing of OUT A and OUT B differs only for 3600th and 5000th pulse.

《Direction discrimination output type》

a = $(1/4 \pm 1/8) P$ b $\geq 1/4 P$
 e: 400 pulses or less 25 to 150%
 500 pulses or more $1^\circ \pm 30'$
 (At 60, 3,600 P: 100 to 300%, 1,800 P: 50 to 150%)

* OUT Z (origin output) is generated when passing the origin position regardless of rotational direction.
